

Attention [xpswmm](#) and [xpstorm](#) v10.6 license holders with current [xpertcare](#) maintenance contracts!

October 16, 2008

XP Software strives to provide our clients with continual improvements to our software through our [xpertcare](#) service and maintenance program. As a part of this commitment, we will provide quarterly updates in the form of Service Pack releases and yearly major upgrades.

We are pleased to announce the immediate release of **Service Pack 3 (10.6.3)** for both [xpswmm](#) and [xpstorm](#) v10.6. Version 10.6.3 offers improved functionality and maintenance upgrades from user requests and reported issues. You can download this newest service pack from the "downloads" section of the XP Software website.

Please note that you must have version 10.6 installed to implement the update. SP3 includes changes made in SP1 and SP2. If you have not yet installed these, simply download and install SP3 to get all updates for the year.

SP3 includes over 40 maintenance and repair requests. They include:

- [xpswmm](#) and [xpstorm](#) 10.6.3 are now compatible with the Watershed Modeling System (WMS) v8.1 import/export link
- Export of storage nodes to EPA SWMM5 has been updated
- DTM contour display options have been updated to use solid lines over color-fill shading and to accept range restriction for detailed contouring over a user-specified interval.
- Graphical plots (flow vs. time, for example) for all components of a multi-link can be displayed on the same graph, rather than one-by-one on individual graphs.
- Multi-Conduit Diameters now updated in pipe design

For a full list of all software changes and enhancements, see our [Version Changes](#) file on our website or the changes.txt file in the [xpswmm](#) or [xpstorm](#) folder after installation.

Visit the following link, login, and download this important upgrade today. No password is required to extract the file. We also recommend that you download the latest updated help file (v10.6.13) Both are available on our Downloads page:

<http://www.xpsoftware.com.au/support/downloads/default.asp>

Please note that you must have version 10.6 installed to implement the update.

For our clients without a current **xpertcare** service agreement, be sure to contact us today to find out how easy it is to re-join and get this and subsequent important releases, as well as access to the best support team in the industry.
